

## COVID-19 VACCINATION

As per the recent Government announcement a COVID-19 vaccine will be made available for our patients over the next few months. As you can imagine it is a logistical challenge to deliver this mass vaccination programme alongside the flu vaccination programme.

Over the coming weeks we will be receiving more detail and as soon as we gain further information about when and where the vaccine will be available for our patients we will let you know. So far we understand that the first cohort of patients will be care home residents and staff followed by patients aged over 80 before being rolled out to the rest of the population in order of age and risk. We believe that roving teams will be vaccinating our housebound patients.

There is no need to contact the Practice until we advise that the vaccine is available. Thank you for your patience during this difficult time for everyone.
